

TRAINING OFFERING

HORTONWORKS UNIVERSITY BLENDED

LEARNING

OVERVIEW

Hortonworks University Blended Learning is a unique offering that combines the flexibility of self-paced learning, with the benefits of live instructor-led sessions. Each Hortonworks Blended course includes lessons and hands-on lab exercises that the student can complete at their own convenience. In addition, each course will have regularly scheduled one to two hour live on-line micro sessions to further enhance and supplement the learning experience.

Pricing for each course will be based on the number of credit hours associated with each course. Students have the option to purchase courses individually, rather than an entire library subscription. This will allow for targeted learning of specific topics. Courses will be updated on an ongoing basis to ensure that the latest information is available to allow students to keep pace with the ever changing field of Big Data.

LIVE MICRO SESSIONS

To further enhance your learning experience, one to two hour live micro sessions will be scheduled. During each session, Hortonworks University instructors will discuss various topics related to each course. Students will also have the opportunity to discuss any course related questions with their instructor. These sessions will also be available in recorded format after each session and can be viewed at any time. **Please note that the live micro sessions schedule is subject to change and instructor availability** but in general will be scheduled once every 2 weeks.

FLEXIBLE PURCHASE OPTIONS

In order to help you meet your learning goals, we offer two options for purchasing courses:

Individual Courses:

Courses can be purchased individually with pricing for each course based on the number on credit hours for each course.

By Learning Path:

Courses can be purchased by path. Currently, the Administrator path is available and contains HDP Administration Foundations, Hortonworks NiFi Flow Management and HDP Security.

DURATION

Access to each Hortonworks University Blended course varies depending on the type of purchase. Courses purchased individually can be accessed via a **6-month** subscription period. Courses purchased as part of a learning track can be accessed via a **12-month** subscription period. Subscriptions are valid for one individual named user. Any additional users who wish to access course content or attend live micro sessions will be required to purchase a subscription.

TARGET AUDIENCE

Hortonworks University Blended courses are designed for architects, developers, analysts, data scientists, and IT decision makers – as well as those new to Hadoop...essentially anyone with a need or desire to learn more about Apache Hadoop and the Hortonworks Data Platform framework

HANDS-ON LABS

Hortonworks University Blended courses include hands-on lab exercises written by Big Data experts. The labs allow students to further reinforce their learning, by providing an opportunity to perform real world tasks. These labs are completed using two different options for lab environments:

Downloadable Virtual Machines:

For some courses, students will be provided with a downloadable virtual machine image. This will allow lab environments to be run locally on software such as VMWare Player or VirtualBox.

Amazon AWS Images:

For some courses, we will provide students with access to Amazon Machine Images (AMI). In this scenario, students will be required to have their own Amazon AWS account. Detailed setup instructions will be provided for each lab environment.

About Hortonworks

Hortonworks is a leading innovator at creating, distributing and supporting enterprise-ready open data platforms. Our mission is to manage the world's data. We have a single-minded focus on driving innovation in open source communities such as Apache Hadoop, NiFi, and Spark. Our open Connected Data Platforms power Modern Data Applications that deliver actionable intelligence from all data: data-in-motion and data-at-rest. Along with our 1600+ partners, we provide the expertise, training and services that allows our customers to unlock the transformational value of data across any line of business. We are Powering the Future of Data™.
